

EAP Ethernet access point

Ethernet access point, radio receiver for ZEDs. It is possible to connect more than one EAP. Each EAP creates its own radio network and can manage several ZEDs, configured for the same radio network. EAP can work as simple receiver, if not connected to the network.

The ZED radio modules send data to the EAP (Ethernet Access Point) receivers connected to the local network and these send data via Ethernet to the collectors called Syrinx. Data are displayed on the FridgeLog Z software that can be installed on more than one PC in the same network as data are shared.

Main features

Accessories

- Syrinx Mini
- Syrinx L
- Syrinx desktop
- FridgeLog Z
