Syrinx L

Syrinx system data collector from EAPL, accepts many
EAPLs. Manages data, saves them in a shared folder or
internal memory, makes them available for the FridgeLog Z
software, manages out of limits alarms. Syrinx L may have
a different look than the one showed in the picture.

The ZED radio modules send data to the EAPL (Ethernet Access Point Lite) receivers connected to the local
network and these send data via Ethernet to the collectors called Syrinx. Data are displayed on the FridgeLog Z
software that can be installed on more than one PC in the same network as data are shared.

Note: the Syrinx L device may be different from the one reproduced in the images.

Accessories
- USB modem
- EAPL Ethernet Access Point Lite
