

TempBLE Delivery

Android App for TempBLE Bluetooth data loggers, designed for temperature controlled transport and logistic applications, downloadable from Tecnosoft website (apk file, to be installed on your Android phone). After pairing with one or more loggers, set the acquisition step and the alarm limits and start the transport. You'll start receiving data in real time and the out of limit alarms. At each delivery you can generate an HTML file to send via email data from transport start. Connecting a Bluetooth printer lets you print all data as well.

If a data is not received it will be retrieved with next connection.

Applications

Logistic&Transport

Main features

- TempBLE management and real time data download
- Alarms on limits in real time
- Geolocalization of the delivery points with creation of a list for rapid search and email generation
- HTML reports automatically sent to the address set in the delivery point

Accessories

- Bluetooth printer
