

Thermal well 70

Fastening system for pouches and other packages, made by a hollow probe of 70 mm where the 3 mm diameter probes of Tecnosoft loggers can be inserted, and a locking bolt at the end. The thermal well is permanently installed on the package and the logger is applied and removed easily thanks to the locking bolt.

The thermal well can be used in combination with the [spacers](#), a set of spacers that allow you to maintain the position of the tip in the center of the envelope.

Check on our Youtube channel for more information.

Applications

Food & Beverages

Pasteurisation

Sterilisation
